Pentax k-70 vs pentax kp

Pentax KP vs Pentax K-70 Comparison Overview Here we are comparing KP and K-70, two DSLR cameras by Pentax. Pentax KP is a Advanced DSLR class camera and Pentax K-70 is a Entry-Level DSLR class camera. Pentax KP was introduced to market in January 2017 and Pentax K-70 was launched in June 2016. There is only 8 months difference between KP and K-70 so we are expecting this to be a fair comparison regarding age and technology level. Here is a brief look at the main features of Pentax KP and Pentax K-70 before getting into our more detailed comparison. In this section, We are going to illustrate Pentax KP and Pentax K-70 side-by-side from the front, back and top in their relative dimensions. Pentax KP has external dimensions of 132 x 101 x 76 mm (5.2 x 3.98 x 2.99") and weighs 703 g (1.55 lb / 24.80 oz) (including batteries). Pentax K-70 has external dimensions of 126 x 93 x 74 mm (4.94 x 3.66 x 2.91") and weighs 688 g (1.52 lb / 24.27 oz) (including batteries). Below you can see the front view size comparison of Pentax KP and Pentax K-70. Comparison image of Pentax KP and Pentax K-70 Size and Weight - Back View Now lets look at the top view comparison of Pentax KP and Pentax K-70. Top View Comparison image of Pentax KP and Pentax K-70 Size Weight is another important factor especially when deciding on a camera that you want to carry with you all day. Pentax K-70 is 15g lighter than the Pentax KP but we don't think this will make a significant difference. Also keep in mind that body weight is not the only deciding factor when comparing two interchangeable camera bodies, you have to also take into account the lenses that you will be using with these bodies. Since both Pentax KP and Pentax K-70 have the same Pentax KAF2 lens mount and APS-C sized sensors, lenses will not be a differentiator on total size of the system. Weight Comparison DSLR Cameras Thickness Comparison DSLR Cameras Weather Sealing Both KP and K-70 have weather sealings in their body, making them resistant to water and dust. LCD Screen Size and Features Pentax KP and Pentax K-70's LCD screens has the same diagonal size of 3.00". Pentax KP features a Tilting only screen which is mostly only good for shooting from waist or over the head levels. On the other hand, Pentax K-70 sports a Fully Articulated screen which is more flexible and useful especially for taking Selfie shots and video. Pentax KP vs Pentax K-70: Sensor Comparison Both Pentax KP and Pentax K-70 have APS-C sized 24.0 MP resolution sensors so sensor size and resolution is not a differentiator between these two cameras. One other difference between these two cameras that is worth mentioning is that Pentax K-70's sensor doesn't have an anti-alias (Low-Pass) filter. Removing anti-alias filter increases the sharpness and level of detail but at the same time, it increases the chance of moire occurring in certain scenes. Below you can see the KP and K-70 sensor size comparison. Sensor Size and Resolution Comparison image of Pentax KP and Pentax K-70 Cameras Pentax KP and Pentax K-70 have the same sensor sizes so they will provide same level of control over the depth of field when used with same focal length and aperture. Pentax KP vs Pentax K-70 Comparison of Available Lenses Which camera has more lenses? Number of available lenses is a big decision factor while choosing your interchangeable lens camera. Pentax KP and Pentax K-70 have the same Pentax KAF2 lens mount and currently there are 161 native lenses available for these cameras. Another important factor is the availability of image stabilization. Both Pentax KP and Pentax K-70 has Sensor based Image stabilization which means that all the lenses will be stabilized in these bodies. KP's built-in Image stabilization system is effective to compensate vibration up to 5.0-stops according to CIPA standards whereas K-70's IS system is rated upto 4.5-stops.
